TAAS Hosts Corteva Agri-Science Delegation for Advancing Agricultural Innovation

Dr R S Paroda, Founder Chairman of The Agriculture Academy of Sciences (TAAS), recently hosted a high-level delegation from Corteva Agriscience, a leading global agriculture company headquartered in the U.S., to discuss cutting-edge advancements in agricultural technology. The meeting, held on November 21, 2025, at TAAS office, focused on exploring collaboration opportunities and understanding the latest innovations set to benefit Indian farmers.

The primary objective of the meeting was to highlight Corteva Agriscience's strategic initiatives in developing advanced seed technologies and gene-editing applications. Corteva combines over two centuries of scientific achievement and agronomic expertise to provide comprehensive solutions—including seeds, crop protection, and digital tools—designed to maximize yields and

improve farmer profitability worldwide.

During the discussion, the Corteva team shared detailed insights into their upcoming products and technologies specifically tailored for the Indian market. These innovations aim to play a vital role in enhancing farmers' incomes and ensuring an abundant, sustainable food supply for India's growing population.

The Corteva Agriscience delegation was led by Mr Marc Cool, Global Seed Policy Lead. He was accompanied by key leaders Ms Ruchira, Head, Advocacy and Industry Affairs and Ms Neetu, Government Affairs Head, from the company's South Asia and India operations, demonstrating the importance of the Indian market to Corteva's global strategy.

Dr Paroda reinforced TAAS's commitment, being a neutral Think Tank, to promoting scientific excellence and facilitating the integration of advanced, safe technologies that contribute to the prosperity of Indian agriculture.
